

NIAGARA

Jednostavno i dostupno rješenje, eliminira potrebu za vodu u bocama

The efficient, lowcost solution that eliminates the need for water bottle management

Ledeni spremnik može kontinuirano točiti velike količine hladne vode

The ice bank can provide large quantities of cold water continuously

Kvaliteta vode je nekompromitirajuća zahvaljujući patentiranoj tehnologiji i ergonomskim rješenjima održavanja razine higijene vode

Water quality remains uncompromised thanks to patented technologies and ergonomic solutions that maintain existing hygiene levels

→ **Visoka efikasnost, niži troškovi, neograničena količina vode**
Higher efficiency, lower costs, unlimited water!

→ “Niagara” aparati za vodu su snažne i pouzdane profesionalne jedinice, koje su posebno dizajnirane za olakšavanje opskrbe vodom u bilo kojem catering objektu (restoranima, hotelima, kavanama ili barovima). “Niagara” opskrbljuje vodom brzo, lako i efikasno.

→ The Niagara water coolers are robust and reliable professional units that have been specially designed to facilitate water provision in any catering environment (restaurants, hotels, cafeterias and bars). The Niagara range makes water provision management fast, easy and efficient.

Niagara IN Niagara TOP

→ Tehnologija i kvaliteta Hi-tech and high-quality

Mod. Niagara Top

Čak i u verzijama uštede prostora...kako bi mogli stati svugdje, TOP i IN verzije su lake za postavljanje, štede prostor dok nude istu razinu kvalitete kao i obični model. Niagara TOP je model za pult, dok je Niagara IN savršena za postavljanje ispod pulta ili u neki drugi manje važni dio prostorije. Ovaj model može se postaviti čak i na većim udaljenostima (do 20m) od slavina i vodovodne mreže.

- Filteri se mogu primjenjivati na svim modelima radi poboljšanja arome i okusa vode, ukoliko je to potrebno.
- Nekoliko sigurnosnih uređaja konstantno nadziru izvedbu (no -water indicator - pokazivač da nema vode u aparatu; hydraulic safety valve - sigurnosni ventil; liter counter - brojač litara).
- Odvod uređaja od nehrđajućeg čelika ili plastike može biti priključen na odvod vode.

The TOP and IN versions are easy to position and make the most of restricted spaces, while offering the same high levels of performance as the floor-standing model. Niagara TOP is a counter-top model, whereas Niagara IN is perfect for positioning under the counter or in other less important parts of the premises.

The under-counter models may even be located at a considerable distance (up to 20 m) from the taps and fittings.

→ Optional filters may be applied to all models to improve the aroma and taste of the water if necessary.

→ Several safety devices - no-water indicator, hydraulic safety valve, liter counter (optional) - constantly monitor the performance of the cooler.

→ The practical stainless-steel or plastic drip tray may be connected to the water drainage.

→ NIAGARA IN slavine / taps for NIAGARA IN

G65 + VR-P

Zakrivljena slavina sa mehaničkom tipkom za kontrolu i JET BREAKER model (ne služi za WG modele).

Dispenser with mechanical pushbutton control and jet-breaker device (not for WG models).

G662 + VR-P

Slavina sa dvostrukom ručicom za kontrolu protoka.

Lever-operated double dispenser tap.

G663 + VR-P

Slavina sa trostrukom ručicom za kontrolu protoka.

Lever-operated triple dispenser tap.

G68N + VR-P

Slavina u koloni sa 3-smjera i ručicom za kontrolu protoka.

3-way column taps with lever.
